

# PINK LADIES

Volume 1, Issue 1

October/November 2008

## INTRODUCTION

Dr. Seung-Jun "Sonny" O is committed to providing outstanding, quality care to all of his patients. One of his passions deals with helping women like you, through the process of breast reconstruction.

Breast cancer can be a very unnerving experience. One day your life is perfectly normal and the next day your life is heading a whole different path. So much information is thrown at you all at once and decisions are made for your care.

**Through the years Dr. O has recognized the need for you to be able to talk to someone who can relate to your problem. We started PINK LADIES to help you through this process. Having someone to connect with is important. Your "lady" can relate to your issues and help your work through your problems . . . but better yet, can be there to support you.**

**"We look forward to building this relationship and helping you through your journey during and after your fight with breast cancer."**

**Dr. Sonny O**

patient to patient  
consultation.**

## Meet our very own survivor, Gene Glave

Gene Glave is our breast cancer coordinator for Saint Francis Hospital. She is a wonderful asset to our team and she can relate first hand to your experiences.

Gene was diagnosed with breast cancer in 2006. She began a blog detailing her journey through surgeries and chemo, that caught the eye of the producing director of the Village Playhouse, who convinced Gene to take those words and make it into a one-woman show. The Mammologues, the result of that idea, was performed to sold-out houses in late 2007 and again at Piccolo Spoleto in 2008. In addition, Gene has spoken to other groups, including nursing groups, the Lowcountry Komen Survivor Luncheon, and survivor groups in Virginia. Gene feels she has a message to bring to her sister survivors and others touched by the disease.

We look forward to you meeting her and encourage all of you to continue sharing your story, because you never know who you can reach.
